UK Guidance

NICE

COVID-19 rapid guideline: managing COVID-19
NICE guideline [NG191] Published date: 23 March 2021
This guideline covers the management of COVID-19 for children, young people and adults in all care settings. It brings together our existing recommendations on managing COVID-19 so that healthcare staff and those planning and delivering services can find and use them more easily. The guideline includes new recommendations on therapeutics, and we will update the guideline further as new evidence emerges.

12 / 3 / 2021 9.31am
The COVID-19 pandemic has impacted on everyone and the longer-term physical and mental health risks are yet to be fully established. In this blog, Gail Kay takes us through the journey of setting up a staff health and wellbeing hub.

Imperial College London
Report 43 - Quantifying the impact of vaccine hesitancy in prolonging the need for Non-Pharmaceutical Interventions to control the COVID-19 pandemic 24th March
Vaccine hesitancy – a delay in acceptance or refusal of vaccines despite availability – has the potential to threaten the successful roll-out of SARS-CoV-2 vaccines globally. Here, we evaluate the potential impact of vaccine hesitancy on the control of the pandemic and the relaxation of non-pharmaceutical interventions (NPIs) by combining an epidemiological model of SARS-CoV-2 transmission with data on vaccine hesitancy from population surveys. Our findings suggest that the mortality over a 2-year period could be up to 8 times higher in countries with high vaccine hesitancy compared to an ideal vaccination uptake if NPIs are relaxed. Alternatively, high vaccine hesitancy could prolong the need for NPIs to remain in place. Addressing vaccine hesitancy with behavioural interventions is therefore an important priority in the control of the COVID-19 pandemic.

Towards safe, stable and sustainable resumption of planned surgical and other procedural disciplines dependent on Anaesthesia and Critical Care services - updated March 2021
19 March 2021
The Royal College of Anaesthetists, Association of Anaesthetists and Faculty of ICM have published this document highlighting factors for consideration when planning resumption of surgical and other procedural disciplines dependent on anaesthesia and/or critical care services. It describes principles rather than detail and is intended for local, regional or national level consideration.
The Intensive Care Society has recently published a policy statement on the recovery and restitution of critical care services during the COVID-19 pandemic, which can be downloaded here.

Reports:

DNAR Decision-making in 2020.
The British Institute of Human Rights; 2021.
https://www.bihr.org.uk/dnarcision-making-2020-bihr
A series of reports based on workshops and surveys with patients/public and staff working in health and social care. who have experienced DNAR decisions during the COVID-19 pandemic.

Care Quality Commission (CQC); 2021.
In this month’s report, we look at the evidence so far about how urgent and emergency care services have been affected by the pandemic during this winter, and discuss what action CQC is taking to provide constructive support.
In this month's report, we share further data on the designated settings scheme for adult social care, and also look into more detail on data on deaths from COVID-19. We want these insight reports to help everyone involved in health and social care to work together to learn from the pandemic.

Protect, respect, connect - decisions about living and dying well during COVID-19.
Care Quality Commission (CQC); 2021.

Report found worrying variation in people’s experiences of do not attempt cardiopulmonary resuscitation (DNACPR) decisions during pandemic. While there were some examples of good practice, CQC also heard from people who were not properly involved in decisions.

Institute for Public Policy Research (IPPR); 2021.

After a decade of austerity, the NHS long-term plan was meant to be a turning point for health care. However, those plans have been severely disrupted by the coronavirus pandemic. This analysis shows the scale of the damage done by the pandemic across several major health conditions. It recommends a package of six ambitious changes to ‘build back better’.

Selected Papers:

Antibodies

Antibody Response After SARS-CoV-2 Infection and Implications for Immunity: A Rapid Living Review.
Review (66 observational studies;n =16 525) found most adults with SARS-CoV-2 infection confirmed by RT-PCR develop detectable levels of IgM and IgG antibodies after infection with SARS-CoV-2 and IgG levels peak ~25 days after symptom onset and may remain detectable for ≥120 days.

Supporting people to work in new ways: what have we learnt from the Covid-19 pandemic?
Kings Fund 7-10th June
PAID Event
Throughout the Covid-19 pandemic health and care staff have been working in different ways and designing new ways to meet the needs of patients and service users, all while under a huge amount of pressure.
At this event, we will take a look at some examples of those changes and how people working in health and care have been working remotely, flexibly and in an agile way to meet the demands created by the pandemic and to develop new and improved ways of working for the future.
